

Biomass is not renewable energy and should not qualify for renewable energy credits. We need to be smarter than this. America must not allow these incinerators. When the Massachusetts Medical Society says that Biomass plants “pose an unacceptable risk to the public’s health by increasing air pollution”, we need to listen. When doctors warned about the dangers of smoking, America listened. Now, doctors are warning about the danger of Biomass, WE NEED TO LISTEN!

Furthermore, these plants require 880,000 gallons of water for cooling and only about 15% is returned-heated and treated. Water is one of our most precious resources. We MUST not allow it to be wasted!

I urge you, for the health and well being of our children, NOT to allow any Biomass plants to be built.
